Senior DevOps Engineer | Azure | Azure DevOps | Terraform | Kubernetes | AKS | CI/CD | Docker

PROFESSIONAL SUMMARY

Senior DevOps Engineer with 10+ years of overall IT experience, including 5+ years of hands-on expertise in Microsoft Azure, Azure DevOps, Terraform, Kubernetes (AKS), Docker, CI/CD, and Infrastructure as Code (IaC). Proficient in building Azure DevOps YAML pipelines, containerizing and deploying applications on AKS using Docker and Helm, and automating infrastructure provisioning through reusable Terraform modules across Development, UAT, and Production environments. Skilled in Azure networking (Virtual Network, NSG, Load Balancer), Azure Key Vault, Azure Monitor, Log Analytics, Prometheus, and Grafana, with hands-on DevSecOps experience integrating SonarQube, Checkov, and TFSec into CI/CD pipelines. Certified Kubernetes Administrator (CKA) with additional Microsoft Azure and cybersecurity certifications, backed by prior telecom infrastructure deployment experience supporting production troubleshooting and high-availability operations.

TECHNICAL SKILLS

Cloud Platforms: Microsoft Azure, Azure Kubernetes Service (AKS), Azure Container Registry (ACR), Azure Storage, Virtual Network (VNet), Network Security Group (NSG), Load Balancer

Containers & Orchestration: Docker, Kubernetes, AKS, Helm, ConfigMaps, Secrets

Infrastructure as Code: Terraform, Terraform Modules, Remote Backend, State Management

CI/CD & DevOps: Azure DevOps, YAML Pipelines, CI/CD, Release Automation, Blue-Green Deployment, Rolling Deployment

Version Control: Git, GitHub, Azure Repos

Monitoring & Logging: Azure Monitor, Log Analytics, Prometheus, Grafana, Application Insights

Security: Azure Key Vault, RBAC, SonarQube, Checkov, TFSec, TFLint

Operating Systems: Red Hat Linux, Ubuntu, CentOS, Windows

Scripting: Bash, PowerShell, Azure CLI

PROFESSIONAL EXPERIENCE

Senior DevOps Engineer — Nokia Pvt. Ltd. — Sep 2025 – Present

- Designed and managed production-grade Azure Kubernetes Service (AKS) clusters supporting highly available telecom applications, ensuring platform scalability and operational reliability.
- Developed reusable Terraform modules to provision core Azure infrastructure — VNets, Subnets, NSGs, AKS clusters, Storage Accounts, Key Vaults, Public IPs, and Load Balancers — standardizing deployment across Development, UAT, and Production environments.
- Built and maintained Azure DevOps YAML CI/CD pipelines covering automated build, validation, security scanning, and deployment stages, reducing manual intervention in the release process.
- Deployed containerized applications to AKS using Docker and Helm Charts, managing ConfigMaps, Secrets, and RBAC to enforce secure, consistent application configuration.
- Configured monitoring and alerting through Azure Monitor, Log Analytics, Prometheus, and Grafana to strengthen visibility into application and infrastructure health.
- Integrated SonarQube, Checkov, TFSec, and TFLint into CI/CD pipelines to enforce DevSecOps practices and validate Infrastructure-as-Code security before deployment.
- Automated recurring operational tasks using Azure CLI, Bash, and PowerShell scripting, cutting down repetitive manual work for the platform team.
- Partnered with development, QA, and operations teams in an Agile/Scrum environment to plan and execute zero-downtime production releases.
- Led infrastructure troubleshooting and root cause analysis for production incidents, validating deployments to maintain platform stability.

DevOps Engineer — Capgemini Pvt. Ltd. — Apr 2022 – Sep 2025

- Provisioned and managed end-to-end Azure cloud infrastructure using Terraform and reusable Infrastructure-as-Code modules across Development, UAT, and Production environments.
- Implemented Terraform remote backend and state management practices alongside reusable modules, variables, and outputs to make infrastructure deployments repeatable and environment-consistent.
- Designed multi-stage Azure DevOps YAML CI/CD pipelines handling build, validation, deployment, and release management for business applications.
- Managed Azure networking architecture — Virtual Networks, Subnets, Network Security Groups, Load Balancers, Public IPs — alongside Storage Accounts and Azure Key Vault to support secure application infrastructure.
- Deployed and operated containerized workloads on Azure Kubernetes Service using Docker and Helm Charts, managing ConfigMaps, Secrets, and RBAC for secure multi-environment deployments.

- Implemented Blue-Green and Rolling Deployment strategies through Azure DevOps release pipelines to support controlled, low-risk production rollouts.
- Standardized Helm-based application deployments with version-controlled release management, improving consistency across releases.
- Integrated SonarQube, Checkov, TFSec, and TFLint into the CI/CD pipeline to raise code quality standards and enforce Infrastructure-as-Code security checks.
- Configured proactive monitoring using Azure Monitor, Log Analytics, Application Insights, Prometheus, and Grafana to support early detection of infrastructure and application issues.
- Automated administrative and operational tasks using Bash, PowerShell, and Azure CLI, improving deployment consistency and reducing manual effort.
- Collaborated with developers, QA engineers, and cloud architects in an Agile/Scrum setting, troubleshooting deployment issues and supporting production releases.
- Participated in production support, root cause analysis, and incident resolution for business-critical applications, contributing to deployment validation and platform stability.

Senior Software Engineer — Mindtree Pvt. Ltd. **Apr 2021 – Apr 2022**

Prior role — Telecom/IMS deployment and production troubleshooting

- Deployed, integrated, and validated IMS network nodes across VMware and OpenStack environments, supporting telecom infrastructure reliability.
- Applied hands-on knowledge of SIP Protocol (RFC 3261), VoLTE call flows, DNS, SDP, and Diameter protocols to troubleshoot and validate telecom application behavior.
- Performed IMS testing, configuration, and troubleshooting across core components including P-CSCF, I-CSCF, S-CSCF, TAS, SBC, and HSS.
- Analyzed SIP signaling and network-level issues using Wireshark, resolving production-impacting telecom faults.

SIP/VoIP Test Engineer — Decon Telecom Solutions Pvt. Ltd. **Apr 2016 – Apr 2021**

Prior role — Telecom/IMS deployment and production troubleshooting

- Validated VoIP and IMS call flows, including VoLTE and VoWiFi, through structured testing across telecom platforms.
- Troubleshot SIP signaling and protocol-level issues using Wireshark, tcpdump, and tshark, supporting root-cause resolution for production systems.
- Performed deployment, integration, and VNF onboarding activities across VMware and Ericsson CEE platforms in telecom cloud infrastructure.
- Conducted post-deployment health checks and alarm monitoring, and collaborated with cross-functional teams during production handover.

PROJECTS

Multi-Environment Azure Infrastructure Automation — Terraform, AKS, CI/CD

Core infrastructure automation work delivered across Nokia and Capgemini engagements

- Objective: standardize and automate provisioning of Azure infrastructure across Development, UAT, and Production to remove manual, inconsistent deployment steps. Architecture: modular Terraform codebase provisioning AKS, VNets, NSGs, Storage Accounts, Key Vaults, and Load Balancers, with environment-specific configuration managed through variables and .tfvars files.
- Implemented reusable Terraform modules, remote backend, and state management to keep infrastructure state centrally tracked and consistent across environments.
- Built multi-stage Azure DevOps YAML pipelines automating Terraform Init, Validate, Plan, and Apply stages, along with Docker image build and Helm-based deployment to AKS.
- Integrated SonarQube, Checkov, and TFSec into the pipeline for code quality and Infrastructure-as-Code security validation, with secrets managed through Azure Key Vault.
- Configured Azure Monitor, Prometheus, and Grafana for infrastructure and application observability across all provisioned environments.
- Added a manual approval gate for Production deployments as a controlled release safety measure.
- Outcome: delivered a reusable, environment-agnostic automation framework that replaced manual provisioning with a consistent, repeatable deployment pattern.

CERTIFICATIONS

- Certified Kubernetes Administrator (CKA)
- Microsoft Certified: Azure Fundamentals (AZ-900)
- ISC2 Certified in Cybersecurity (CC)

EDUCATION

- Bachelor of Technology (Computer Science & Engineering) — Kolhan University, Jamshedpur, Jharkhand, India (2014)

Languages: English, Hindi
